Hello Fabrice,

I have nothing heard since my last mail on the status of the boat in Australia

I have added a Software Guide of Kreisel where is everything described. (Balancing example)

Due to the cell topic, we have a way how to find bad cells.
This works like the following:

- Charge the battery up to 100%
- Wait 5h – disconnect the LV Plug in this time
- Take a Trace of the “Sensor CAN” for about 1min.
- Disconnect the LV Plug and wait 24h.
- Take a new Trace of the “Sensor CAN” for about 1min.
- Send the traces and we can analyse if there is a issue with a cell.

This way is faster and should a possible way for you.

If you have further questions don´t hesitate to ask.

Best regards.

Michael Haiböck

Betreff: Australian boat (number #20) battery status

Hello again Michael,

Thank you again for our telcon.

One question I forgot to ask you : have you had any feedback from the Australian boat (number #20) battery status, as it was supposed to be shipped back to you for analysis ?

Best Regards

Fabrice Pichard
